aquatica

VOLUME 15

Who is Aquatica?

After being made redundant just over 17 years ago, Malcolm Box, together with his wife Christina, started Aquatica.

Customers have access to a great deal of knowledge

The Sales Department alone has a combined experience of over 150 years in the plumbing industry. Their shared passion for what Aquatica is doing with innovation and service has resulted in their customers seeing them as their best supplier and end-consumers frequently raving about the service they receive.

Malcolm was passionate about quality tapware, had a dream about developing New Zealand's best laundry tub and was looking forward to building a business, using his 13 years' experience in tapware. He was keen to develop products without the constraints imposed by corporate business practices.

What Malcolm and Christina both valued was the contribution that people make to a good business and they wanted to prove to themselves that it was possible to run an ethical family business, that cared about its staff, could model integrity in everything and could still be successful.

These beliefs are the core values of Aquatica today, with over 40 hand-picked staff, committed to the business, to delivering quality, to helping customers and caring about one another. It's still a family business, 100% owned, and one of the country's major suppliers of tapware and laundry tubs. Most of the staff have been with the business since their job was first created and these staff are the chief assets of the business. This has meant that customers have access to a great deal of knowledge.

What does all this mean for you?

It means that when we say we deliver customer service we don't just pay lip-service – an entire culture of customer service has developed in the business since the beginning so that everyone knows that helping someone else in the business helps them to help the customer.

We do fulfil unusual customer requests, if at all possible. We don't use voicemail – we figure our customers ring up because they want to talk to us. We frequently service product even when it's an installation fault. Within the business we have four staff in Engineering, two in Product Development and another 20 assembling and testing tapware and laundry tubs. It's all very well buying a beautiful Aquatica product but it's really comforting to know that, should something go wrong, you've got all that knowledge and a willing attitude to help, to fall back on.

It's also pretty cool to know that you're supporting a business doing its level best to operate with integrity, be environmentally-conscious and at the forefront of product innovation.

Here are some of the things our customers have to say:

"We were one of Aquatica's first customers when they started their business over 17 years ago. Now we are one of their single biggest customers and continue to use Aquatica due to their innovative products and great service. We also like to deal with other independent NZ companies."

**Stan Juchnowicz, Managing Director,
Zip Plumbing Plus, Wellington (14 stores)**

"Cambridge Homes has been using Aquatica tapware and laundry tubs in our new builds for the past five years. We have always been impressed with both the quality of the product and the service Aquatica provides. Malcolm, the Managing Director is, to put it simply, a hell of a nice guy with a great team and a product we're proud to recommend."

Phillip Webb, Cambridge Homes Waikato

"Our no.1 choice of tapware supplier is Aquatica. Why? Well there are the obvious reasons like quality products and great range, but it's more than that. Aquatica have a great team of people backing their product and supplying amazing service. They are dependable and always willing to go the extra mile. It's because of this that we can sell Aquatica product with confidence."

Walter Goldstein, Plumb'In Group

"People quite often ask me 'Why Aquatica?'. It's simple really. Their laundry tub is not only of excellent design it's also value for money and we seldom if ever get complaints. When it comes to taps if we get a call re a problem our Aquatica representative does not hesitate to fix it. In fact a couple of times the product he went to inspect was not even Aquatica, but he still repaired it for us. It certainly gives you confidence when selling or recommending Aquatica to know you can rely on them. Aquatica is one out of the box."

Murray Knowles, Governing Director, Edward Gibbon Ltd

"Aquatica supplies us great service and product, and always delivers on time – they are one of the best in the industry."

Tony Neilson, Placemakers Kaiwharawhara

Save water Save power Save money

It isn't hard to save water and it can save you money in the long run. Check out the following suggestions, all of which are possible without any great changes to your family's washing habits.

Saving water is not necessarily about running the tap for a shorter amount of time or having a quicker shower. Families generally run a tap for the same length of time not realising it could be running as high as 15 litres of water per minute. So lowering the flow is the quickest and easiest solution to water saving.

In the bathroom, an easy option for saving water in a mains pressure system* is to fit our German-made pressure compensating aerator. This can be quickly and easily placed into the aerator housing of your existing bathroom tap and will change the flow of your tap to a soft spray of 3 litres per minute. So if it takes 30 seconds to wash your hands, you could start saving more than 8 litres of water every hand wash. If there are 10 hand washes in your family per day, that's a saving of up to 31,000 litres per year (plus of course the savings in electricity as well).

*Note: These aerators are for mains pressure only. On a low pressure system, fitting an aerator could cause cold water to back-feed into your hot water line.

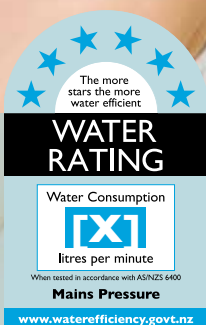

Around 80% of a home's hot water is used in the shower. If you have good mains pressure, your mixed flow could be up to 20 litres per minute, so a 10 minute shower could use around 200 litres of water. By reducing the flow to 10 litres per minute, you could halve your water usage while still getting a good long shower. A family of four, still showering 10 minutes each a day, could save 400 litres of water a day (or around \$600 a year) plus the cost of heating the water which could be

another \$600 a year. So by simply installing an Aquatica 10-litre per minute pressure compensating washer into a handshower hose, substantial savings can be made.

We don't recommend reducing the water flow in the kitchen or over the bath as this doesn't usually save water. You'll want to fill the jug or the bath until almost full - and the quicker, the better!

So lowering the flow of water is the quickest solution for saving water and, as we've already said, your family won't need to change their washing habits to do it. If you can adopt other practices, such as turning off the tap while brushing your teeth, you'll save even more!

Lowering the flow
is the quickest
solution to saving
water, without
changing habits

Under the WELS regulations, you will notice tapware and handshowers have star ratings. These ratings will help the consumer to make buying decisions on new products based on their water saving features.

The more stars, the more water is saved.

Selecting tapware to suit your pressure system is important for trouble-free operation and optimum performance.

Fortunately, most Aquatica tapware is engineered to work on all pressure systems. However, water pressures vary considerably and it's important to recognise what sort of system you have to help you make an intelligent choice.

What water pressure system have you got?

The two most common systems are:

Unequal Pressure:

This is the most common system in New Zealand. A header tank or pressure reducing valve is usually used to supply low pressure water to the hot water cylinder.

How to recognise this system

- The cold water flow is much greater than the hot.
- There's a header tank in the loft or a pressure reducing valve just before cold water enters the hot water cylinder.
- Hot water cylinders are marked 3.7m head or 7.6m head.
- Vent pipe through the roof.

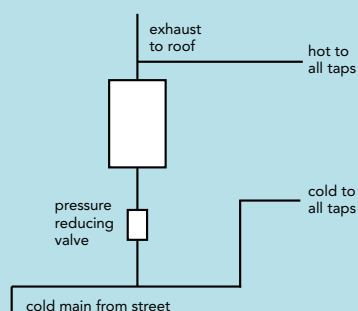

Equal Mains Pressure:

This system uses a special hot water cylinder which is fitted with a pressure limiting valve for safety.

How to recognise this system

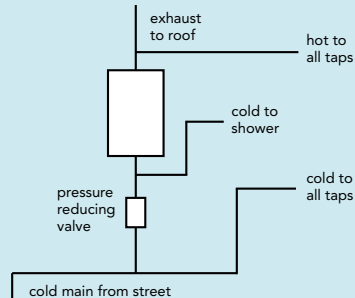

- The hot and cold water flow is strong and equal.
- The hot water cylinder is described as a mains pressure cylinder.
- Almost all gas hot water systems are mains pressure.

Unequal Pressure Reducing Valve:

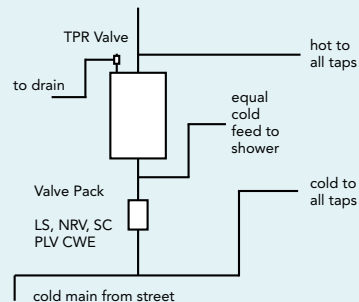

1. Cold water is stronger than hot
2. Pipe through roof
3. Look at the cylinder

Equal Pressure Reducing Valve:

1. Cold water is stronger than hot
2. Pipe through roof
3. Look at the cylinder
4. Shower flow is low and equal

Equal Mains Pressure

1. Cold and hot water strong and equal
2. Look at the cylinder

Innovative ideas from Aquatica

Isolator Filter Stops

Installing isolator filter stops to your taps is a great way of protecting ceramic mechanisms from small particles of dirt. These particles can scratch the ceramic cartridge which can then cause the tap to leak. (This applies to all tapware products, regardless of their origin). Isolator filter stops are an ideal solution to this problem because they:

- Are easy to install
- Provide good filtering on the line and excellent hot and cold flow
- Are easy to access when the filter needs cleaning
- Allow water to be turned off at the sink (rather than at the mains)
- Come with a stainless steel backing flange for a really smart finish

Easy installation of Bath Spouts

After all plumbing has been installed, and any tiles fitted, these bath spouts can then be secured in place with an allen key.

Rotary Ceramic Cartridge

The rotary ceramic cartridge in the Novecento and Mini Kris shower mixers provide for easy mixing of hot and cold water. As the mixer is turned, the cold water gradually becomes warm, through to hot. The amount of water flow can also be adjusted during installation using flow control valves on the mixer.

NOVECENTO SHOWER MIXER (SEE PAGE 13). ALSO AVAILABLE IN THE MINI KRIS RANGE (SEE PAGE 12).

Single Lever Mixers

Single lever sink mixers not only provide quick and easy adjustment of water flow, they are also much more hygienic than conventional kitchen taps. Imagine your hands have been contaminated with bacteria during the handling of, for instance, raw chicken. With a conventional tap, you would need to touch both taps to wash your hands, transferring bacteria onto them. You would then re infect your hands once again when you turned the taps off. A single lever mixer can be controlled with the back of the hand, preventing the transfer of such bacteria.

Our Exposed Sink Mixer (pictured) offers all the advantages of a single lever mixer, has the ability to operate on equal and unequal pressures and can be fitted without the need for expensive plumbing alterations. The virtually effortless operation makes it an ideal choice for anyone having difficulty operating a conventional tap set.

EXPOSED SINGLE LEVER
MIXER, PAGES 22, 23 AND 24

Shower Cartridges

Kerox cartridges have an innovative disc design which provides more water flow and a smoother shower mix, by giving greater control when moving the lever from hot to warm. Built into the shower mixer body are these handy control valves.

These valves allow adjustment of the mixer to either limit the flow of water on mains pressure or balance the flow on unequal pressure. This ensures that mixers can be altered to suit all types of installation.

CONTROL VALVE

Flexible Connections

Both the Novecento and Berlino Basin Sets come with flexible connections for easy installation.

NOVECENTO AND BERLINO BASIN SET, PAGES 25 AND 27

Forte and Xera Low Pressure Shower Mixers/Bath Fillers

The mixer incorporates a 45mm ceramic cartridge for a better shower on low pressure and much quicker fill for your bath.

OBLIO SINK MIXER WITH
WATER FILTER

Xera and Oblio Water Filter Mixers

The Xera and Oblio water filter mixers include a long life water filter cartridge, sourced from America. The KDF/GAC is a "two-media" cartridge consisting of KDF (high-purity copper-zinc alloy) and GAC (granular activated carbon), providing superior filtration qualities. Through the electrolytic and oxidation reactions of the KDF and the absorption and entrapment capabilities of the GAC, the KDF/GAC can remove or greatly reduce a wide range of contaminants through to 30,000 litres.

The KDF media also provides a bacteriostatic effect which is hostile to algae, fungi and bacteria. The OKDF30/1 is also Cyst safe.

ECO-SMARTE MULTI SPRAY
HANDSHOWER SET
SM MSHSS
(Also marketed as
Sinfonia Multi Spray
Handshower Set)

Eco-Smarte Handshower

Aquatica is proud to have been voted by Consumer Magazine as having the Number 1 Shower Head for water saving and shower comfort.

Our Eco Smarte and Sinfonia shower heads topped the list over six other shower heads that were independently tested.

Ezimix Shower Mixer Divertor

Aquatica shower mixers are unique in their design and offer features that really perform in low/unequal and mains pressure systems.

The Ezimix Shower Mixer with Divertor has a 45mm cartridge manufactured in Europe and is assembled and tested in New Zealand. It is suitable for equal low, unequal and mains pressure systems (35-600kPa). The unique disc design provides more water flow and a smoother temperature mix by giving greater control when moving the lever from hot to warm. We also supply a one-way valve for the hot inlet and a flow control valve for the cold inlet. These are fitted at the installer's discretion (dependent on the plumbing system involved) and adapt the mixer to any system - low, unequal or mains.

MIXER/BATH FILLER
PICTURED WITH THE
XERA HANDLE

Haven't we come a long way in the last 50 years? In that time we have seen a huge transformation in our bathrooms. Originally a purely functional cold space where we would spend a minimum of time, the bathroom is now much more than a place to become clean. Increasingly, bathrooms are designed to be a sanctuary, a place to retreat from the pressures of our busy lives.

While no one, surely, would ever want to return to those "good ole days", we do appear to be going back to a few of our earlier traditions, but bringing them into the future.

Once upon a time the stand-alone bath was parked in front of the family fire for the weekly wash. 100 years later, the stand alone bath is back, but this time a functional sculpture in a room that is a relaxing haven after a hard day at work.

You might even find a gas fire there to help create warmth and a relaxing ambience.

So we've come a long way, with consumers now expecting, and getting, a higher standard of bathroom experience.

Back to the Future

And now, to provide a sense of separation but maintaining the convenience, you will often find the toilet, still part of the bathroom, but perhaps tucked behind the shower, or behind a frosted glass screen to provide a greater sense of privacy.

Known more attractively now as the laundry, the old "wash house" continues to maintain its place in the home though what a transformation it has undergone!

The laundry tub is no longer a massive concrete bowl with rubber hoses tied onto conjoined hot and cold taps, but in its place is a work of art! Now with doors or drawers, slim or wide cabinets, stainless or composite tops, simple or stunning sink mixers, Aquatica has a range of tubs to bring the good old Kiwi laundry back to the future.

The lone kitchen tap has also come full circle. While today's single lever mixer supplies both hot and cold water, it still means we are living, once again, with the lone tap in the kitchen, bathroom and laundry. Thankfully design is now everything and there is so much choice that it's hard to know where to start.

Of course nowadays, with the stress and strain of everyday living, the essentials for a comfortable leisure-time existence are seen as being more important than ever. While the added features of cushions and candles have traditionally only been seen in the lounge or bedroom, you will increasingly see these in bathrooms to soften the hard lines and help add to the ambience of an attractive, innovative retreat

So whether you live in an older house or a new, modern one, the past and the future look like they will always be inextricably intertwined as we mould the old to suit our modern demands.

Where space is available new builds and renovations alike, are frequently seeing the inclusion of the stand alone bath, with a striking floor-standing bath filler adding an elegance not seen with the traditional built-in bath and spout and with the advantages of a handshower to rinse off the bubbles before stepping out, to wash the kids hair, or to rinse down the bath afterwards with ease. (And add a TV to the bathroom and you know you've arrived!)

Sadly we don't always have time to soak in a long hot bath and with this in mind, Aquatica have sought to bring a little bit of luxury to the shower area as well. With the release of the Multiport Shower System, consumers now have the ability to personalise their own shower fixtures. This new multiport system offers the option of having up to five outlets. Starting with the 2 or 3 function overhead shower unit with inbuilt LED coloured lights, more options can then be added in the form of body jets and a separate slide shower or even a bath spout. Suddenly the shower takes on an attractiveness of its own, and becomes a place to relax and spend time! Add a Blue tooth handshower and you can even listen to your favourite tunes while you shower.

The toilet was once always in a room by itself, sometimes even outside the house. Then, we saw the toilet become included, for convenience, with all the other ablution fittings.

Eco-Smarte

This eco-friendly range accommodates consumers who want a future-proof product in their home. Eco-Smarte products can be quickly adapted to reduce the flow on mains pressure installations - thus reducing your waste water and saving on your power and water costs.

- Greater flow on low pressures.

Suitable all pressures above 35kPa (*except where noted).

5 Year Warranty.

2 Year Warranty - Handshower Sets and Pull-Out Spray Head.

BASIN MIXER

Our Eco-Smarte range is also fitted with a cartridge that will allow greater flow for those with low pressure systems.

- Temperature limiting controls
- Flow restrictors
- Greater flow on low pressures
- Free Lifetime Warranty upgrade

Bath Spouts

Aquatica offers an extensive range of bath spouts, from beautiful waterfall spa spouts to elegant designer standard bath spouts. There's even a spout that can divert between the bath spout and a handshower - great for bathing the children.

Bath spouts are generally suitable for all pressures. Only spouts with internal restrictions are rated mains pressure only. An aerator could restrict flow on low pressure systems but this can be replaced with a flow guide. Adding a divertor will restrict flow slightly.

5 Year Warranty.

NOTES: 1 Installation Box (IBox) requires installation prior to finish lining

Bring the sounds of a waterfall into your bathroom and blur the lines between indoors and out.

Rain Heads

Aquatica's range of rain heads offers style and functionality for those who enjoy a significant soaking or a delicate drenching. Available in a round, square or oval design.

Suitable all pressures. Minimum pressure required at head 35kPa (*except where noted).
2 Year Warranty.

Hint: for a truly minimalistic look, mount a large rose directly on the ceiling.

The Titan quietly disposes of almost anything - corn cobs, fish bones, coffee grinds, grapefruit halves, nut shells & much more.

Features include:

- Torque Master advanced balanced grinding system for faster grinding
- Bioshield anti-microbial protection to reduce germs and odours
- RPM 2700 – Maximum torque & high speed
- Corrosion proof grind chamber and drain housing
- Stainless steel grinding components for long lasting durability and no failure due to corrosion
- Speed Master mounting system for fast installation
- Removable splash guard
- Full sound insulation (760 and 960); partial sound insulation 660
- Overload switch to protect your motor if there is food jammed in the grinding chamber
- Balanced turntable reduces vibration and noise
- 3 year warranty for 960; 2 year warranty for 760 and 660
- AS/NZS 60335.2.16.2006 – Complies with NZ Domestic Waste Disposer Electrical Standards

Titan 960

AQ TITAN 960

- 3/4 Horse power
- Full sound insulation
- Stainless steel grinding components
- RPM2700
- Overload switch
- Permanent magnet motor
- Balanced grinding system
- 3 year warranty

Titan 760

AQ TITAN 760

- 1/2 Horse power
- Comes with built-in Air Switch
- Full sound insulation
- Stainless steel grinding components
- RPM2600
- Overload switch
- Permanent magnet motor
- Balanced grinding system
- 2 year warranty

We do not recommend the following to be placed into the disposer:

- Potato skins
- Stringy food such as celery and banana skins

The disposer is for food waste only so non-food items should not be put down the disposer.

Titan 660

AQ TITAN 660

- 1/2 Horse power
- Partial sound insulation
- Stainless steel grinding components
- RPM2600
- Overload switch
- Permanent magnet motor
- Balanced grinding system
- 2 year warranty

* No warranty available for commercial use

OPTIONAL ACCESSORIES

Plug & Disposer tool
A multi-purpose tool that functions as a plug and a plunger to push waste into the disposer

AQ SHARK SCRAPPY

Silverguard

A strong magnet which attracts kitchen utensils and other miscellaneous metal objects from falling into the disposer

AQ MAGNET

Mr Scrappy Disposer Brush

Unique design that fits nicely in your food waste disposer to help reduce germ and bacterial build up. Cleans and scours and features a key-grip handle to help brush turn easier.

AQ TITAN BRUSH

Single air switch with switched and unswitched outlets. Can be installed on your sink or benchtop around wet areas

AQ SHARK AIR SWITCH

Aquatica Warranty

Aquatica NZ Limited offer the following warranty periods on its range of tapware from the date of purchase.

Residential Use

- Tapware - 5 year warranty
- Laundry Tub Cabinet – 5 year warranty
- Handshowers, Shower Roses – 2 year warranty
- Pull-out Sprays and spray heads on Sink Mixer Coils – 2 year warranty
- Commercial tapware – 2 year warranty

Commercial Use

- Tapware - 1 year warranty
- Laundry Tub Cabinet – 2 year warranty
- Handshowers, Shower Roses – 1 year warranty
- Pull-out Sprays and spray heads on Sink Mixer Coils – 1 year warranty

Only high quality workmanship and materials have been used in the manufacture of Aquatica's tapware. If any workmanship or material is proven faulty during the warranty period, Aquatica NZ Limited will, at its own cost or option, repair or replace the faulty product.

The warranty is transferable but the original proof of purchase from an authorised Aquatica distributor is required for all claims.

Aquatica's liability will not extend to damage caused by reasonably foreseeable loss such as inappropriate materials in a wet area ie. floating wooden floors.

Waterlines to tapware incorporating a ceramic cartridge or ceramic disc mechanism should have an inline strainer or filter fitted. Absence of these may void the warranty.

Any suspected defect must be notified to Aquatica as soon as possible after discovery. All repair work must be performed by a plumber who has received authorisation from Aquatica prior to proceeding with the work. Aquatica may immediately authorise repair work to be undertaken, however, this is not necessarily acceptance of liability.

Aquatica guarantee that the tapware will be able to handle temperatures up to a maximum of 70°C.

Water pressure up to 1000 kPa is the maximum limit for the tapware. Above this the warranty will become void.

Serial numbers or tags should not be removed from the products as they are essential in establishing warranty.

Every effort has been made to show the products as they will be sold, however, all models and specifications are subject to change without notice.

Aquatica® April 2017
